BTX BioTech X-ray Merges with American Mobile X-ray

St. Louis, Missouri – BTX BioTech X-ray is pleased to announce that it has merged with American Mobile X-ray, LLC on January 1, 2016. American Mobile X-ray had provided portable x-ray services to the Ohio and Kentucky areas since 2003. This acquisition will increase BTX’s service area to those regions in Ohio, Kentucky, and Indiana.

Jamie Bettis and Jay Braun will continue to be part of our combined organization and will be available to you in the same capacity that they have been in the past. They will continue to be your first line contact at the same numbers you have reached them in the past. In addition, the AMX technologists and staff will continue providing services as usual without disruption. The phone number, pricing and services will also continue without interruption.

“This acquisition is a great fit for our organization, and it opens exciting opportunities for us in this part of the Midwest,” said BTX president and founder Tamara Schwartz. “We share the same business values, and commitment to customer satisfaction, so the transition for their staff and clients has been seamless.”

Former AMX customers will now benefit from BTX’s comprehensive range of portable diagnostic services and advanced technology, including digital direct radiology (DR) that produces images rivaling those produced in hospital settings. This high-definition x-ray allows images to be viewed immediately at bedside rather than after developing film, as

with traditional film-based x-rays. BTX also offers a web-based radiology information system, with 24/7 online access, that can integrate with most facilities' Electronic Health Record systems.

BioTech X-ray, Inc. (BTX) is a portable diagnostic imaging service based in St. Louis, Missouri and celebrated 21 years of business last July. A network of more than 40 mobile units provide same-day x-ray service 24 hours a day, every day of the year, to non-hospital settings in Illinois, Indiana, Iowa, Kansas, Kentucky, Missouri, Oklahoma, and Ohio. Portable services include direct digital radiologic (X-ray) exams, EKGs, Holter monitoring, diagnostic ultrasounds, Doppler studies, echocardiograms and endoscopic swallow studies.

BTX was one of the first portable x-ray companies in the Midwest to offer widespread use of the superior image quality of digital direct radiology (DR), while maintaining its core commitment to patient and customer care. The organization has expanded its capabilities and service area since its inception in 1994 by acquiring Nelson Mobile X-ray of Davenport, IA in 2003, Interpretive Diagnostics of Springfield, IL in 2005, Anderssen Mobile X-ray Services of St. Louis, MO in January 2011, Portable X-ray of Des Moines, IA in December 2012, US X-ray of Lenexa, KS in July 2013, and American Mobile X-ray in January 2016.
